

TITLE

**UNIVERSAL METHOD FOR PROCESSING A MESSAGE IN A NON-NEGOTIATED
LANGUAGE AND APPARATUS FOR RECEIVING SUCH A MESSAGE FOR
COMMUNICATION BETWEEN DEVICES**

ABSTRACT OF THE DISCLOSURE

Apparatus and method of the present invention, is able to receive information written in a non-negotiated language, such as Extensible Markup Language (XML), and determine to what extent the information can be discerned. If the information can be discerned, it is processed to the extent it is capable of being discerned. Otherwise, to the extent the information is not capable of being discerned information is disregarded and not processed. In further aspects of the present invention, multiple messages may be broadcast and received by the apparatus and method of the present invention. Such messages may be broadcast in a wired environment or a wireless environment without the need for a predetermined fixed handshaking protocol, to systems, such as a personal digital assistant.
